## Abstract

The purpose of this paper is to evaluate the social impact caused by the general standardized training base under the county medical community model. As a new model of healthcare service system reform, the county medical community focuses on improving the service capacity of primary healthcare, while the general standardized training base is an important guarantee for developing general practitioners. Through the comprehensive analysis of the operation of general standardized training bases under the county medical community model and other aspects, it can be found that general standardized training bases have played a positive role in promoting the construction of county medical community, optimizing the allocation of medical resources, and upgrading the level of primary medical services. Therefore, the construction and development of general standardized training base should be further strengthened to meet the needs of primary care and promote the construction of healthy China. This paper assesses its positive contributions to the society, economy and healthcare system, and puts forward corresponding policy advice in the hope of providing reference for the deepening development of county medical community in the future.

## Keywords

County Medical Community; General Standardized Training Base; Social Impact.

## 1. Introduction

County medical community is a new model of healthcare service system reform, aiming at integrating medical resources within the county and improving the capacity of primary medical services. As an important part of this system, general standardized training base is responsible for training general practitioners to meet the demand for overall and continuous medical services at the grassroots level. The role of the general standardized training base in the county medical community is mainly education and training, and it undertakes the task of developing qualified general practitioners, these doctors will become the backbone of primary medical services. Through systematic theoretical and practical teaching, the base ensures that trainees master all-round medical knowledge and practical skills. It is essential to assess the social impact of the general standardized training base, which helps to understand the actual role played by the bases in improving the quality of primary medical services, alleviating the problem of difficult to see a doctor, and promoting the construction of healthy China, moreover, it provides an important basis for further optimizing the model of the county medical community and the general medical education.

## **2. Operation of General Standardized Training Base under the County Medical Community Model**

### **2.1. Establishment Background and Development Process of General Standardized Training Base**

Under the county medical community model, the establishment of general standardized training base is aimed at improving the level of primary medical services and meeting the growing medical and healthcare needs of residents. With the deepening promotion of medical reform, general standardized training base has gradually become an important part of the county medical community. Its development history has gone through the process from scratch, from small to large, by continuously improving training facilities, expanding the teaching staff, improving the training quality, as well as systematic general medicine education and practical training, the general standardized training base has supplied a large number of qualified general practitioners to the county medical community, effectively alleviate the problem of the shortage of primary healthcare talents, and upgrades the service capacity of primary healthcare institutions. Furthermore, the general standardized training base also actively participates in medical and healthcare scientific research, promoting the sustainable development and innovation of the county medical communities.

### **2.2. Organizational Structure, Teaching Resource Allocation and Management Mode of General Standardized Training Base**

General standardized training base usually have a perfect organizational structure, including administrative management, teaching, training and trainee management departments. In the allocation of teaching resource, the base focuses on the combination of theory, and are equipped with abundant teaching materials, teaching aids and simulation training equipment. It also employs a group of experienced general practitioners as teachers to ensure the teaching quality. In management mode, the general standardized training base adopts scientific and standardized management system, focuses on the personalized training and comprehensive evaluation of trainees. It ensures that trainees can fully master the knowledge and skills of general medicine through strict teaching programs and assessment standards. This effective combination of organizational structure, teaching resource allocation and management mode provides a strong guarantee for the development of qualified general practitioners.

### **2.3. Collaborative Mechanism between the General Standardized Training Base and Other Medical Institutions in the County Medical Community**

An efficient and close collaborative mechanism has been established between the general standardized training base and other medical institutions in the county medical community. In order to ensure the consistency and quality of medical services, all parties have carried out in-depth cooperation in resource sharing, referral process, joint training and other aspects. The general standardized training bases not only send systematically trained general practitioners to other medical institutions, but also work together with them to develop clinical pathways and treatment plans adapted to the characteristics of the county. When dealing with public health emergencies, this collaborative mechanism has played a great role in realizing rapid response and effective treatment. In addition, through regular academic exchanges, case discussions and other activities, all parties work together to improve the clinical diagnosis and treatment level and scientific research capacity. This close collaboration provides more convenient and efficient medical services for county residents and promotes the overall development of the county medical community.

### **3. Social Impact Analysis of General Standardized Training Base under the County Medical Community Model**

#### **3.1. Contribution of General Standardized Training Base under the County Medical Community Model to County Economic Development**

The general standardized training base plays a positive role in promoting the economic development of the county. By training a large number of qualified general practitioners, the base has effectively improved the level of primary medical care in the county and attracted more residents to seek medical treatment locally, then has led to the development of medical and related industries in the county. In addition, the general standardized training bases have also attracted the input of external funds and resources, injecting new vitality into the county economy. These external resources are not only used for the construction and development of the base itself, but also drive the infrastructure construction and development of related industries in the neighboring areas. Therefore, general standardized training base has played an important role in promoting the economic development of counties, making a positive contribution to the sustained growth of local economies and social progress.

#### **3.2. Contribution of General Standardized Training Base under the County Medical Community Model in Enhancing Employment and Improving People's Livelihoods**

The general standardized training bases under the county medical community model have made significant contributions to enhancing employment and improving people's livelihood. The construction and operation of the bases have created a large number of local employment opportunities, including a number of positions for doctors, nurses and administrative staff, as well as related positions for medical support, management and logistics, effectively promoting the employment of labor in the county. Meanwhile, by developing more qualified general practitioners, the base has enhanced the service capacity of primary medical institutions and optimized the supply of medical services, making residents enjoy quality medical services at their doorsteps and effectively improving people's well-being.

In addition, general standardized training bases also emphasize the development of doctors' sense of social responsibility and humanistic care, actively participate in public welfare activities such as health poverty alleviation and volunteer clinics, so as to provide more help to the disadvantaged groups, further reflecting their positive role in enhancing employment and improving people's livelihood. Therefore, general standardized training base under the county medical community model is not only an important part of the medical service system, but also an important force in promoting the economic and social development of the county and improving the quality of life of residents.

#### **3.3. The Role of General Standardized Training Base under the County Medical Community Model in Enhancing the Level of Primary Medical Service**

The general standardized training base under the county medical community model plays a crucial role in upgrading the level of primary medical services. Through systematic and comprehensive training in general medicine, this base has supplied a large number of general practitioners with professional knowledge and practical skills to primary care organizations. These doctors are competent for primary medical work and effectively respond to the needs of diagnosis and treatment of common and frequent diseases, which significantly improves the service level of primary medical institutions.

Furthermore, the general standardized training base also focuses on developing the clinical thinking, communication and collaboration, and health management abilities of doctors, so that they can better establish long-term stable doctor-patient relationships with residents and

provide continuous and all-round medical services. This not only enhances the trust of residents for primary medical institutions, but also promotes the sustainable development of grassroots medical services. Therefore, the general standardized training base under the county medical community model is an important support for improving the capacity of primary medical services, laying a solid foundation for building a hierarchical diagnosis and treatment system and optimizing the layout of medical resources.

### **3.4. Impact of General Standardized Training Base under the County Medical Community Model on the Health Level of Residents Within the County**

The general standardized training base under the county medical community model have had a positive and far-reaching impact on the health level of residents in the county. Through systematic development of general practitioners, the bases have effectively improved the service quality of primary healthcare organizations, enabling residents to have more convenient access to comprehensive and continuous medical services. This not only provides timely diagnosis and treatment of common and frequent diseases, but also reduces the risk of residents falling ill through health education and disease prevention.

Furthermore, the general standardized training base focuses on cultivating doctors' humanistic care and communication skills, which promotes harmonious doctor-patient relationship and enhances residents' trust and satisfaction with medical services. Such trust and good doctor-patient interaction further enhance residents' awareness of health management and promote the popularization of healthy lifestyles. Furthermore, the general standardized training base also emphasizes health education and health promotion, and improves residents' health literacy and self-care ability through health lectures, volunteer clinics and other activities. Therefore, the construction of the general standardized training base not only enhances the capacity of primary medical and health care services in the county, but also contributes positively to the improvement of the overall health of the residents and provides a strong guarantee for the health and well-being of the residents in the county.

### **3.5. Contribution of General Standardized Training Base under the County Medical Community Model in Optimizing the Allocation of Medical Resources**

The general standardized training base under the county medical community model has played an important role in optimizing the allocation of medical resources. By developing qualified general practitioners, the base has effectively alleviated the problem of talent shortage in primary healthcare organizations and enhanced the capacity of primary healthcare services. Moreover, the construction and operation of the general standardized training base has promoted the sinking and sharing of medical resources, and the balanced distribution of medical resources within the county. The base has also introduced advanced medical technology and management experience through cooperation and exchanges with higher-level medical institutions, further enhancing the overall level of medical services in the county.

In addition, the general standardized training base also focuses on its role as a link in the medical community, which strengthens collaboration and cooperation between different medical institutions, and achieves optimal allocation and efficient use of medical resources. This not only improves the accessibility and convenience of medical services, but also reduces medical costs, providing county residents with better quality and more economical medical services. Therefore, the general standardized training bases under the county medical community model have played an active role in optimizing the allocation of medical resources, and have made important contributions to the promotion of county medical and health care cause.

### **3.6. The Role of General Standardized Training Base under the County Medical Community Model in Promoting the Reform of the Medical System**

The general standardized training base under the county medical community model plays an important role in promoting the reform of the medical and health care system. As a key link in the development of general practitioners, general standardized training base has actively responded to the national healthcare reform policy and continuously optimized the training mode and content to meet the needs of primary healthcare services in the new era. By developing more qualified and outstanding general practitioners, the general standardized training base has injected new vitality into primary healthcare organizations and enhanced the quality and efficiency of primary healthcare services. Moreover, the general standardized training bases also actively participate in the exploration and standardized of the reform of the health care system, providing valuable experience and advice to policy makers. Therefore, general standardized training base is not only an important platform for developing general practitioners, but also an important force in pushing the reform of the healthcare system to a deeper level, making positive contributions to building a better and more efficient medical system.

### **3.7. Impact of General Standardized Training Base under the County Medical Community Model on the Development of the Medical Industry and Related Industries**

The general standardized training base under the county medical community model have had a significant impact on the development of the medical industry and related industries. First of all, the construction and operation of the base have improved the level of primary medical services in the county and enhanced the competitiveness of medical institutions, thus promoting the good development of the entire medical industry. Furthermore, the large number of qualified general practitioners trained by the general standardized training bases has sent fresh blood to the medical industry and optimized the talent structure. In addition, the general standardized training base have driven the development of medical equipment, pharmaceutical production and other related industries.

With the enhancement of medical service capacity, residents' demand for medical devices and medicines has increased accordingly, providing a broader market space for related industries. The construction and operation of the bases also create a large number of direct or indirect employment opportunities, injecting vitality into local economic development. Therefore, the general standardized training bases under the county medical community model not only promote the progress of the medical industry, but also have a positive driving effect on related industries, making an important contribution to the overall development of the county economy.

### **3.8. The Role of General Standardized Training Base under the County Medical Community Model in Promoting Social Equity and Equity in Medical Services**

The general standardized training base under the county medical community model plays an important role in promoting social equity and equity in medical services. The base has effectively upgraded the service capacity of primary healthcare organizations through systematic development of general practitioners, making more residents enjoy quality healthcare services at their doorsteps. This not only reduces the financial and time costs incurred by residents due to the inconvenience of seeking medical treatment, but also improves the accessibility and equity of medical services.

Furthermore, the general standardized training base focuses on grass-roots, rural-oriented training direction, supplying a large number of much-need medical talents to rural areas, which

alleviates the problem of uneven distribution of medical resources between urban and rural areas. This balanced layout of medical resources helps narrow the gap between urban and rural medical services and promotes social equity. Therefore, the general standardized training base under the county medical community model has played a positive role in promoting the equity and popularization of medical services, and injected a new impetus into the balanced development of China's medical and healthcare undertakings. It is also one of the important measures to realize the strategy of healthy China and build a harmonious society.

## 4. Conclusion

In summary, the general standardized training base under the county medical community model has had a positive social impact in many aspects. It not only effectively improves the level of primary medical services and optimizes the allocation of medical resources in the county, but also makes significant contributions to promoting the economic development of the county, enhancing employment and improving people's livelihood. Furthermore, the construction and operation of the general standardized training base has also promoted the reform of the medical and healthcare system, and injected new vitality into building a more efficient, fair and sustainable medical and healthcare system. In addition, the base also focuses on developing doctors' humanistic care and sense of social responsibility, it enhances residents' trust in and satisfaction with primary healthcare organizations through the provision of continuous and comprehensive medical services, and further raises their awareness of health management and health standards. Therefore, the construction and development of general standardized training bases should continue to be strengthened in order to meet the needs of primary medical care, promote the construction of healthy China and realize the goal of a well-off society in all respects.
